

Computational Learning Theory and Natural Learning Systems. Volume I: Constraints and Prospects. Edited by Stephen José Hanson, George A. Drastal, and Ronald L. Rivest. MIT Press, Cambridge, MA. (1994). 565 pages. \$49.95 (Volume I), \$39.95 (Volume II).

Contents:

Preface. Introduction. I. Foundations. 1. Logic and learning. Daniel N. Osherson, Michael Stob, and Scott Weinstein. 2. Learning theoretical terms. Ranan B. Banerji. 3. How loading complexity is affected by node function sets. Stephen Judd. 4. Defining the limits of analogical planning. Diane J. Cook. II. Representation and bias. 5. Learning hard concepts through constructive induction: Framework and rationale. Larry Rendell and Raj Seshu. 6. Learning disjunctive concepts using domain knowledge. Harish Ragavan and Larry Rendell. 7. Learning in an abstraction space. George Drastal. 8. Binary decision trees and an "average-case" model for concept learning: Implications for feature construction and the study of bias. Rej Seshu. 9. Refining algorithms with knowledge-based neural networks: Improving the Chou-Fasman algorithm for protein folding. Richard Maclin and Jude W. Shavlik. III. Sampling problems. 10. Efficient distribution-free learning of probabilistic concepts. Michael J. Kearns and Robert E. Shapire. 11. VC dimension and sampling complexity of learning sparse polynomials and rational functions. Marek Karpinski and Thorsten Werther. 12. Learning from data with bounded inconsistency: Theoretical and experimental results. Haym Hirsh and William W. Cohen. 13. How fast can a threshold gate learn? Wolfgang Maass and György Turán. 14. When are k -nearest neighbor and backpropagation accurate for feasible-sized sets of examples? Eric B. Baum. IV. Experimental. 15. Comparing connectionist and symbolic learning methods. J.R. Quinlan. 16. Weight elimination and effective network size. Andreas S. Weigend and David E. Rumelhart. 17. Simulation results for a new two-armed bandit heuristic. Ronald L. Rivest and Yiqun Yin. 18. Hard questions about easy tasks: Issues from learning to play games. Susan L. Epstein. 19. Experiments on the transfer of knowledge between neural networks. Lorien Y. Pratt. Contributors. Index.

Computational Learning Theory and Natural Learning Systems. Volume II: Intersections between Theory and Experiment. Edited by Stephen José Hanson, George A. Drastal, and Ronald L. Rivest. MIT Press, Cambridge, MA. (1994). 449 pages. \$49.95 (Volume I), \$39.95 (Volume II).

Contents:

Preface. Introduction. List of contributors. I. Learning theory. 1. Bayes decisions in a neural network-PAC setting. Svetlana Anulova, Jorge R. Cuellar, Klaus-U. Höffgen and Hans-U. Simon. 2. Average case analysis of k -CNF and k -DNF learning algorithms. Daniel S. Hirschberg, Michael J. Pazzani and Kamal M. Ali. 3. Filter likelihoods and exhaustive learning. David H. Wolpert. II. Model selection and inductive bias. 4. Incorporating prior knowledge into networks of locally-tuned units. Martin Röschisen, Reimar Hofmann and Volker Tresp. 5. Using knowledge-based neural networks to refine roughly-correct information. Geoffrey G. Towell and Jude W. Shavlik. 6. Sensitivity constraints in learning. Scott H. Clearwater and Yongwon Lee. 7. Evaluation of learning biases using probabilistic domain knowledge. Marie desJardins. 8. Detecting structure in small datasets by network fitting under complexity constraints. W. Finnoff and H.G. Zimmermann. 9. Associative methods in reinforcement learning: An empirical study. Leslie Pack Kaelbling. III. Learning algorithms. 10. A schema for using multiple knowledge. 11. Probabilistic hill-climbing. William W. Cohen, Russell Greiner and Dale Schuurmans. 12. Prototype selection using competitive learning. Michael Lemmon. 13. Learning with instance-based encodings. Henry Tirri. 14. Contrastive learning with graded random networks. Javier R. Movellan and James L. McClelland. 15. Probability density estimation and local basis function neural networks. Padhraic Smyth. IV. Dynamics of learning. 16. Hamiltonian dynamics of neural networks. Ulrich Ramacher. 17. Learning properties of multi-layer perceptrons with and without feedback. D. Gawronska, B. Schürmann and J. Hollatz. V. Applications. 18. Unsupervised learning for mobile robot navigation using probabilistic data association. Ingemar J. Cox and John J. Leonard. 19. Evolution of a subsumption architecture that performs a wall following task for an autonomous mobile robot. John R. Koza. 20. A connectionist model of the learning of personal pronouns in English. Thomas R. Shultz, David Buckingham and Yuriko Oshima-Takane. 21. Neural network modeling of physiological processes. Volker Tresp, John Moody and Wolf-Rüdiger Delong. 22. Projection pursuit learning: Some theoretical issues. Ying Zhao and Christopher G. Atkeson. 23. A comparative study of the Kohonen self-organizing map and the elastic net. Yiu-fai Wong. References. Index.

Logic Programming: Proceedings of the Eleventh International Conference on Logic Programming. Edited by Pascal Van Hentenryck. MIT Press, Cambridge, MA. (1994). 752 pages. \$75.00.

Contents:

Program Committee. The Association for Logic Programming. Series foreword. Preface. Referees. Invited Talks. Lazy functional state threads: An abstract. John Launchbury, Simon Peyton Jones. Advanced tutorials. Implementation of Andorra-based languages. Sverker Janson. A tutorial on synthesis of logic programs from specifications. Kung-Kiu Lau, Geraint Wiggins. Modularity in logic programming. Evelina Lamma, Paolo Mello. Abduction and abductive logic programming. A.C. Kakas, P. Mancarella. Semantics I. Splitting a logic program. Vladimir Lifschitz, Hudson Turner. Language independence and language tolerance in logic programs. Norman McCain, Hudson Turner. Computing stable models by program transformation. Jürgen Stuber. Declarative interpretations reconsidered. Krzysztof R. Apt, Maurizio Gabbriellini. Parallelism. ACE: And/Or-parallel Copying-based Execution of logic programs. Gopal Gupta, Manuel Hermenegildo, Enrico Pontelli, Vitor Santos Costa. Hybrid tree search in the Andorra model. Remco Moolenaar, Bart Demoen. Parallel CLP on Heterogeneous networks. Shyam Mudambi, Joachim Schimpf. PDP: Prolog Distributed Processor for Independent AND/OR
